

Packages - Bug #2263

New LLVM breaks [libre/kdevelop] and [libre/qtcreator] (blocks upgrading)

2019-04-02 12:25 AM - freemor

Status: fixed	% Done: 80%
Priority: broken	
Assignee: bill-auger	
Category:	
Description Both will need rebuilds. I've started on kdevelop. Created this BR to (hopefully) stem the tide of "it's broken/can't upgrade" BRs related to this issue. I'll get qtcreator next. This will take a while these are larger builds	

History

#1 - 2019-04-02 05:19 PM - freemor

- % Done changed from 0 to 70

x86_64 packages away!

armv7h packages cooking

i686 llvm 8.0.0. hasn't landed yet

#2 - 2019-04-06 12:00 PM - freemor

- % Done changed from 70 to 80

kdevelop for armv7h pushed

#3 - 2019-08-01 05:14 AM - bill-auger

i thought we lost 'kdevelop' to the 'qt5-webengine' bandwagon

anyways there is an updated PKGBUILD for qtcreator v4.9.2 in abslibre - it builds ok for x86_64 but i havent checked it out - if someone gets to qtcreator before me, look for an error in the GUI like this:

```
/usr/lib/qtcreator/plugins/libQbsProjectManager.so:  
Cannot load library /usr/lib/qtcreator/plugins/libQbsProjectManager.so: (libqbscore.so.1.12:  
cannot open shared object file: No such file or directory)
```

it is present in the current version v4.8.2 and seems harmless so i didnt fix it
