

Packages - Bug #2278

[keepassxc] pulls in systemd (conflicts with elogind)

Description when pulling in keepassxc, pacman also attempts to resolve dependencies by pulling in systemd-tools and systemd. keepassxc should not depend on any init system though, not sure why that is happening currently, this conflicts with a system which makes use of elogind/openrc, as elogind and systemd are not compatible together

it seems this is an issue with more packages too, and i guess this might be an upstream issue (?) not sure

#2 - 2019-04-13 01:11 AM - ktsukik

through **#parabola** irc i was made aware that the **openrc-desktop** meta set exists, as well as **systemd-dummy** . i wasn't aware of either, and those resolve the dependency issues i experienced
