Description	
Similar to Octopi	
<pre>\$ smplayer qt5ct: using qt5ct plugin Cannot mix incompatible Qt library (version 0x50c02) with this library (version 0x50c01) Aborted (core dumped)</pre>	

History

#1 - 2019-04-12 05:27 PM - freemor

- Status changed from unconfirmed to info needed

runs fine on my i686 system.

Please make sure your system in in a consistent stat by using

```
sudo pacman -Suy
```

at the commandline.

Try again. If problem persists.. please list exact steps to reproduce

#2 - 2019-04-12 08:27 PM - v3d

Same as in [#2280](#)

System is updated, it's reproducible just by trying to run it.

#3 - 2019-04-12 08:38 PM - freemor

What I was saying above:

in my fully up to date i686 Parabola system 0 errors occur when I run smplayer. So it looks like something with your system

Please try:

```
sudo pacman -Syuu
```

This will also downgrade any packages that are above what Parabola is offering. Making sure you are inline with the repos.

#4 - 2019-04-12 08:41 PM - v3d

-Syuu reports there's nothing to do

#5 - 2019-04-12 08:46 PM - freemor

Then we need to figure out what is bent in your system.

but first:

edit your /etc/pacman.d/mirrorlist

so only Server = [https://repo.parabola.nu/\\$repo/os/\\$arch](https://repo.parabola.nu/$repo/os/$arch) is uncommented

and

sudo pacman -Syyuu

this may be an issue with an out of sync mirror

#6 - 2019-04-12 08:47 PM - freemor

- Parent task set to #2280

#7 - 2019-04-12 09:03 PM - Anonymous

s/smplasyer/smplayer

#8 - 2019-04-12 09:04 PM - Anonymous

Have you installed any foreign packages?

\$ pacman -Qm

#9 - 2019-04-12 09:25 PM - v3d

```
pacman -Qm  
ca-certificates-cacert 20140824-4.1  
wbar 2.3.4-3
```

I didn't install anything from aur - the only time these could have been installed is when I had to disable package verification and rebuild keys or pacman wouldn't install any updates.

Looking further into it I remove

parabola-theme-blackmate and parabola-laf - both of which depended on qt5-styleplugins but don't seem to be in any of the repos...

When I remove qt5-styleplugins both smplayer and octopi work but everything is dead ugly and white and I can't reinstall it because parabola-laf and parabola-theme-blackmate don't seem to be in the repos. :)

#10 - 2019-04-12 09:26 PM - bill-auger

- Status changed from info needed to duplicate

closing this issue - refer to Bug [#2280](#)

#11 - 2019-04-12 09:30 PM - bill-auger

'parabola-laf' and 'parabola-theme-blackmate' are in the [pccr-testing] repo
