Description Please, add to ununrar the possibility to extract files in .rar archives from file-roller. Actually ununrar is pretty good for look at .rar content but you can't extract anything (unless you use unar from command line).	

History

#2 - 2012-11-23 11:06 AM - mtjm

How do you know it doesn't support extraction of files?

It doesn't support some useful options like partial extraction, not overwriting newer files or not making a separate directory for the extracted files, I will implement these.

#3 - 2012-11-23 12:08 PM - mtjm

Will update the package for partial extraction after testing passworded archive support. unar options don't support other ways of extracting files (e.g. ignoring paths or not overwriting newer files), so they won't be implemented yet in ununrar.

#4 - 2012-11-24 04:48 AM - mtjm

Uninstalling ununrar solves this by making file-roller use unar directly.
