Description I am trying to use the install.sh script on the OpenRC LXDE live ISO, and when I select the "Install Base System" option, it fails with this error: error: failed to prepare transaction (conflicting dependencies) :: your-initfreedom and systemd-nss-myhostname are in conflict	

History

openrc is a bit tricky to install with an automated script just now - you would need to run a few commands first

```
cd /root/.scriptsInstallation/  
sed -i 's|archlinux)|archlinux archlinux32)|' ./install.sh  
sed -i 's|base-openrc|base-openrc systemd-libs-dummy systemd-dummy|' ./install.sh
```

then you should be able to run the install script successfully

Thanks for the help. Adding these to the script worked for me!
