<b>Category:</b>			
<b>Description</b> after upgrading from redmine from 3.0-stable to 4.0-stable, redmine started throwing intermittent failures:  <code>ActiveRecord::ConnectionTimeoutError (could not obtain a connection from the pool within 5.000 seconds (waited 5.005 seconds); all pooled connections were in use):   app/models/setting.rb:235:in `check_cache'   app/controllers/application_controller.rb:90:in `user_setup'</code>  journalctl shows this error:  <code>SIGPIPE: writing to a closed pipe/socket/fd (probably the client disconnected) on request /issues/227&gt; uwsgi_response_writev_headers_and_body_do(): Broken pipe [core/writer.c line 306] during GET /issues/&gt;</code>  i tried increasing the number of rails db pool connections and timeout, but that did not seem to help
