Blocked by libretools - Bug #246: [libremessages] set the term title	**fixed**	**2012-11-28**

History

#3 - 2012-04-08 01:36 PM - fauno

i searched for this too. there's is a control code that can do this, at least urxvt interpreted it ok, but tmux didn't, it kept showing "bash" on the terminal title. i know at least weechat can change the title at will without problems, but it's written in c. control codes should be the same though.

#4 - 2012-11-28 09:08 AM - lukeshu

libremessages' "term_title" properly sets the title for:

- xterm (TERM ~= xterm*) * rxvt (TERM ~= rxvt*) * tmux * screen

So this is ready to be done by someone familiar with fullpkg.

#6 - 2015-06-07 01:05 AM - lukeshu

- Status changed from open to not-a-bug

fullpkg has been removed from git master in favor of dagpkg.
