<b>Description</b> Please, add to ununrar the possibility to open .rar archives password-protected with file-roller. Actually this is not possible (only unar from command line works good with .rar archives password-protected)

ununrar gets the password option and ignores it instead of passing it to unar and lsar. Can you send me a GPG-encrypted mail with a RAR file I can test it on or a working link to one?

##### #3 - 2012-11-24 04:48 AM - mtjm

Solved by uninstalling ununrar, file-roller can use unarchiver directly.
