Description			
<i>TLDR: if you have this problem today, open /etc/pacman.d/mirrorlist and copy one of the commented-out parabola mirrors to the top of the mirrorlist - then pacman -Syu</i>			
the 'guile' package from arch was upgraded yesterday but the parabola repos still have the previous version, and the redirector can not find any arch mirror with that package - it is a dependency of 'make', so a rather important package			
https://www.archlinux.org/packages/extra/x86_64/guile/			
today someone reported several haskell packages with the same situation			
perhaps related: i removed the 'gnutls-guile' package from the repos yesterday but the parabola mirrors still have it			
anyone using the redirector with these packages installed will not be able to upgrade			
error: failed retrieving file <P> from redirector.parabola.nu : The requested URL returned error: 404			
warning: failed to retrieve some files

the last repo import for extra, community, and archlinux32 failed because of invalid signatures - archlinuxarm succeeded though - i downloaded those packages to winston and verified them with pacman-key - must have been a fluke - i ran the db-import services manually on those three and they all succeeded
