<b>Description</b> When I boot my OpenRC LXDE netinstall ISO, I see that my device is not 'a Secure Boot platform'. FSF says it should be called 'Restricted Boot' ( <a href="https://www.fsf.org/campaigns/campaigns/secure-boot-vs-restricted-boot">https://www.fsf.org/campaigns/campaigns/secure-boot-vs-restricted-boot</a> ).

- Status changed from *unconfirmed* to *not-a-bug*

that blog article only says that it might be better called that - it is not on the list of confusing "words to avoid" - that is what the FSDG "confusion" clause refers to
