I think it needs to be rewritten, but I think we need to keep it. More on this in the morning. Or maybe after that. I have an exam on Thursday and an AO-100 I want to get working by Friday.

OK, the purpose of libremakepkg needs to be to run some freedom-verification crap. From the user's perspective, it should be almost exactly like makepkg.

#4 - 2012-11-28 09:47 AM - mtjm

I used it without knowing that it has this feature nor what this feature does (which imo should be split into a different script: isn't it used for each PKGBUILD once, not for each build?). I use libremakepkg to build packages in the chroot with correctly managed sets of packages installed there.
