

libretools - Bug #24

[fullpkg] and [treepkg] solve the same problem

2012-02-27 06:53 PM - mtjm

Status:	fixed	% Done:	0%
Priority:	bug		
Assignee:	fauno		
Category:			
Description			
This is unoptimal, since a user needs to choose one of them and at least some changes need being done twice.

treepkg solves the same problem with less than the number of lines required for fullpkg:

```
/l $ sed -e "/^$/d" -e "/^#/d" treepkg | wc -l
112
/l $ sed -e "/^$/d" -e "/^#/d" fullpkg* | wc -l
289
```

- Status changed from open to in progress

and now we have a third one called `dagpkg` that solves dependencies in a directed graph :P

since it has better dependency solving i think we should deprecate both treepkg and fullpkg

#7 - 2014-01-14 02:44 PM - mtjm

Yes, adding dagpkg to the master branch and a packaged release should make them unnecessary (if it supports use outside of the chroot) and solve issue #20.

- Assignee set to fauno

It does if you remove the pacman -Syu before running FULLBUILDCMD. Copying PKGBUILDs around and other stuff that's mostly inside-chroot specific should be moved to HOOKPREBUILD.

It also requires working toru-path and toru-where, I don't know if this is the case in master.

- Status changed from in progress to fixed

fullpkg and treepkg have been removed from git master in favor of dagpkg.
