Description oaken-source - could you explain the entries in the sections "repo.db entries with mismatched signing keys:" and "packages with invalid signatures:" - it looks like a bug with the lint script - the keyring package is on those lists - that is signed by the autobuilder - that signature is surely valid the entries referring to 'C3F4FFCF3EAE8697' are correct; but the ones with 'GPG-EXIT 33554433' look fishy libre/armv7h/parabola-keyring: GPG-EXIT 33554433 != A170D6A0B669E21A libre/armv7h/parabola-keyring-20190719-1-any.pkg.tar.xz: no public key: gpg-exit 33554433 https://lists.parabola.nu/pipermail/maintenance/2019-August/010323.html BTW - where is the code for the linter? - i have some checks i could add to it Dev mailing list Dev@lists.parabola.nu https://lists.parabola.nu/mailman/listinfo/dev	

History

#1 - 2019-08-13 06:05 AM - bill-auger

- Status changed from *unconfirmed* to *not-a-bug*

#2 - 2019-08-13 10:38 AM - oaken-source

- Status changed from *not-a-bug* to *confirmed*

Yes, this is a probably a bug.

BTW - where is the code for the linter? - i have some checks i could add to it

I've pushed it to git.parabola.nu here:

<https://git.parabola.nu/~oaken-source/parabola-repolint.git/>

and there's also a mirror on github.
