Description I looked at it but didn't really investigated that much. The webkit2gtk package has "gst-libav: nonfree media decoding" in its optdepends. I don't know if it uses nonfree software for it or it's just free software to decode nonfree media.	

History

#1 - 2019-08-15 09:28 PM - freemor

free software to decode non-free (patent enchrnered) media.
gst-libav is licensed under GPLv2.

#2 - 2019-10-10 01:52 PM - freemor

- Status changed from unconfirmed to not-a-bug
