

Packages - Bug #2526

Removed volumes are still displayed on desktop

2019-10-30 05:22 PM - Anonymous

Status: not-a-bug	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description When I insert some device which has partitions and mount them, icon appears on desktop. However, sometimes there are two icons and one is never removed until logging out even if device is physically removed. System is installed using Calamares from systemd Desktop complete iso.

is this about LXDE? - and is this about the LiveISO, or about the installed system?

#2 - 2019-10-31 03:28 PM - Anonymous

Yes. I only know about installed system, did not try on Live ISO.

I find my self wondering is this is a bug at all.

Yanking external media without informing the system (unmounting) is very bad practice

Depending on how the device was mounted there may even be stale mounts in /etc/mtab

This seems more like a case for user education then a bug.

Light DEs like XFCE often just have a very basic mount/unmount mechanisms.

see if it helps to install 'udiskie'

also check that the feature is enabled - open the pcmanfm file manager and use the menu to find:

edit -> preferences -> volume management

then make sure the 'mount removable media automatically' is checked

#5 - 2020-12-28 08:10 PM - bill-auger

- Status changed from unconfirmed to not-a-bug

closing as stale
