<b>Description</b> Sometimes when I run Tor Browser from my Desktop I see temporary files. They are removed immediately, but I see them. They disappear when I go to "Desktop" directory and refresh it.	

### History

Tor browser is not a Parabola package.

Seeing stale files on the Desktop is quite common on some DEs if Refreshing the desktop clears the since deleted files then I'd call that normal behaviour.

Sounds like you installed Tor browser in a way that is throwing things on the desktop instead of some saner location. Maybe re-check how you installed/are using it.

many such self-contained binary programs will install .desktop files on first run - they dont have a proper installer/uninstaller; so it is not possible for that program to know when it gets deleted - one must clean up those orphaned files manually
