Description	
Hi,	
linux-libre 5.3.8 does not boot on a Thinkpad X220. I am attaching the relevant part of the syslog. Here's the more evident errors:	
Nov 09 18:41:06 x220 kernel: general protection fault: 0000 #1 PREEMPT SMP PTI [...]	
Nov 09 18:41:06 x220 kernel: BUG: kernel NULL pointer dereference, address: 0000000000000030 [...]	
Nov 09 18:41:06 x220 kernel: Oops: 0000 #2 PREEMPT SMP PTI	
Downgrading to 5.3.7 fixed this.	
I also found it strange that the 5.3.8 kernel plus headers occupies almost 30 MiB less than 5.3.7.
