Description \$ blueman-manager Traceback (most recent call last): File "/usr/bin/blueman-manager", line 18, in <module> from blueman.main.Manager import Blueman ModuleNotFoundError: No module named 'blueman'	

History

#1 - 2019-11-20 12:24 AM - bill-auger

possibly related to <https://labs.parabola.nu/boards/5/topics/235>

possibly related to <https://labs.parabola.nu/issues/2552>

also, possibly related to <https://lists.parabola.nu/pipermail/dev/2019-November/007520.html> - which would indicate, that 'blueman' just needs a re-build against the new python

- Description updated

#3 - 2019-11-23 01:56 AM - freemor

blueman is a [community] package which means that it's for the Arch maintainer to rebuild.

Can the OP please make sure they are up-to-date and check if this issue still exists.
Don't want to forward upstream if the maintainer rebuilt in in the last day or so.

#4 - 2019-11-25 07:40 PM - pisechka

Already ok

#5 - 2022-05-08 05:25 PM - Zuss

Starts without issues on v2.2.4. It looks like the issue was fixed on rebuild back then too

#6 - 2022-05-14 12:14 PM - Zuss

- Status changed from unconfirmed to not-a-bug
