- Status changed from unconfirmed to info needed

As dash-to-panel is not in the repos

we'll need more info

From whence did you install it?

What error did it throw?

Expected behaviour?

What was the actual behaviour?

etc.

Thanks

apparently i had them installed in /home/ partition and since i didn't touch it, all my user extensions were back all of them were broken, not only dash-to-panel as i realized after posting this br

i guess i can compare it with screenshots that gladly i've taken before

you know, albert einstein is credited with the quote;

"two things are infinite: the universe and human stupidity; and i'm not sure about the universe"

for me that was his greatest theorem, and i happen to have proven it myself just by living

i 'fixed' it by the way
