Description	
As discussed in IRC, running `pacman -Syu` gives the following errors:	
<pre>:: Synchronizing package databases... nonprism is up to date libre is up to date core is up to date extra is up to date community is up to date nonsystemd is up to date pcr is up to date libre-multilib is up to date multilib is up to date pcr-multilib is up to date :: Starting full system upgrade... warning: polkit: local (0.116-3.nonsystemd1) is newer than extra (0.116-3) resolving dependencies... looking for conflicting packages... error: failed to prepare transaction (could not satisfy dependencies) :: installing dbus (1.12.16-3) breaks dependency 'dbus-openrc' required by avahi-openrc</pre>

Of course, because you probably have [nonsystemd] above all other repos, which is what [ThisIsMyAccount](#) does not do. Newbie issues like this are caused by their inexperience, not devs mistakes

i made the default pacman.conf more complete recently - that

should help people put the repos in the right order, especially when using octopi

https://git.parabola.nu/abslibre.git/tree/libre/pacman/pacman.conf.x86_64#n113

I'm having this issue too. I have nonsystemd above all the other repos. I have moved it to bottom once and tried just for the sake of it. no change. I even tried "pacman -S nonsystemd/avahi-openrc". Still I get:

```
resolving dependencies...
looking for conflicting packages...
:: dbus and dbus-elogind are in conflict (libdbus). Remove dbus-elogind? [y/N]
```

I have installed from the latest openrc cli ISO just today and still having this issue. Everything is near default and a bare bones. Any idea to why this is happening?

dbus-elogind is deprecated, use nonsystemd/dbus

I updated dbus, this issue is now solved

Thanks.

I did a "sudo pacman -Syu" but it was complaining that there is a dbus service already there. I did "sudo rc-update delete dbus" and then upgraded and it's working fine. I actually got this when installing openrc-desktop and leafpad. I can install them fine now. So I can confirm it is fixed.

I think the [OpenRC](#) wiki page needs change. It has:

```
And restart with rc-service. Also make sure you are using dbus-elogind.
```

Unhashing the nonsystemd repo under /etc/pacman.conf solved this for me.
