

Packages - Bug #2632

Default fonts in XFCE

2020-02-15 09:39 AM - ani

Status: unconfirmed	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description	
My system: Parabola GNU/Linux-libre x86_64.	
Description: After a recent upgrade the fonts got broken. The default fonts in my XFCE system has enlarged some of the characters. All of the numbers are larger, space and other symbols (* and #) are enlarged.	
Expected behavior: All of the font symbols should have been unchanged in size.	
Current behavior: All numbers in both regular and monospace default fonts in XFCE are enlarged in size. Other symbols are affected as well but it seems that alphabet characters remain as they should.
