Description			
<p>Hi!</p> <p>I updated my system yesterday, and today, my lxsession-logout menu only shows options to block screen, switch user and close session. The options to suspend, hibernate and shutdown are gone. I don't know if lxsession-logout is actually responsible for that, because when I close the session, the session greeter (to log in again) does not show those options either. If nobody else is affected, where can I start digging to figure out where the problem lies? Thank you.</p>			

History

#1 - 2020-02-17 07:22 PM - nona

Using lightdm

```
pacman -Qs '(lxsession|lightdm)'

local/lightdm 1:1.30.0-2
  A lightweight display manager
local/lightdm-gtk-greeter 1:2.0.7-1
  GTK+ greeter for LightDM
local/lxsession 1:0.5.4-1 (lxde)
  Lightweight X11 session manager

grep '^DISPLAYMANAGER' /etc/conf.d/xdm

DISPLAYMANAGER="lightdm"
```

Using OpenRC

```
ls -l /usr/bin/init

lrwxrwxrwx 1 root root 11 ene  4 19:12 /usr/bin/init -> openrc-init
```

Kernel

```
uname -r

4.19.101-gnu-1-lts
```

#2 - 2020-02-17 07:26 PM - nona

polkit seems disabled for some reason

Error mounting /dev/sdb1: GDBus.Error:org.freedesktop.UDisks2.Error.NotAuthorized: Not authorized to perform operation (polkit authority not available and caller is not uid 0)

[SOLVED] I updated my computer today, and I have the options to hibernate again. I don't think to have changed anything else.

#4 - 2020-02-27 01:29 AM - freemor

- Assignee set to freemor

Closing as OP says the issue was transient.

#5 - 2020-04-05 09:19 PM - bill-auger

- Status changed from unconfirmed to not-a-bug

freemor you did not close it
