- Priority changed from bug to wish

#2 - 2020-03-09 01:34 PM - bill-auger

a bit more information would be good - what does this program do? - could you at least offer a URL to the software website

we need to consider new packages according to the value/cost ratio of auditing and maintaining them - for example, does it add some new functionality to parabola, that no other programs currently does? - or is a another "yet another" tool for a job that five other programs already accomplish?
