

Installation Media - Bug #2642

Reason: The installer failed to create a partition table on ST320LT012-9WS14C.

2020-02-26 12:38 PM - Olep

Status:	unconfirmed	% Done:	0%
Priority:	bug		
Assignee:			
Category:	Installer		
Description			
I tried with and without internet connection, before and after an independent hard format of the disk, without changing any default configuration during the installation and I always end with the same message and error log.			
As a bonus, this is the result with the systemd iso. With the OpenRC one I can't connect to the wifi, even though all components of my PC are listed one the h-node site.			

History

#1 - 2020-02-26 12:43 PM - Olep

Forgot to mention that I've been able to install another GNU/Linux-libre distro (GNU Guix) without any issue on the same machine.

- Category set to Installer

there is actually two different bugs described there - the one regarding openrc may be related to this ticket #2628 - i will categorize this one as related to the installer

did you try an MBR partition table? - also, it may help if you ensure that there are no existing partitions before starting the installer - there has been problem and some work done to calamares recently - the next version may behave better

#3 - 2020-03-09 03:17 PM - Olep

Sorry, I actually haven't specified that but it's quite important. I tried both to create manually the partition before opening the graphical installer and to simply format the entire disk with no results or difference.

#4 - 2020-03-09 03:23 PM - bill-auger

unfortunately, its not worth the effort to track down bugs in that version of calamares - calamares moves quite fast; and it and the systemd ISOs are over-due for an upgraded replacement now - i could put a priority on getting the next calamares out before the next ISOs; so that can be tested - but maybe you already have successfully installed parabola now, and dont need it - were you able to get parabola installed? - there are several other ways to do it with that same LiveISO

#5 - 2020-03-09 03:47 PM - Olep

Unfortunately, I haven't tried it again due to a very harsh time at work. I'll try again asap and I'll keep you updated, but I agree with you that upgrading calamares in the upcoming ISOs is the best way to proceed.

Thanks!
