<b>Description</b>	
<pre>\$ pacman -Ss pycrypto community/python-pycryptodome 3.9.7-1   Collection of cryptographic algorithms and protocols, implemented for use from Python 3. community/python-pycryptodomex 3.9.0-3   A self-contained Python package of low-level cryptographic primitives community/python2-pycryptodome 3.9.7-1   Collection of cryptographic algorithms and protocols, implemented for use from Python 2. community/python2-pycryptodomex 3.9.0-3   A self-contained Python package of low-level cryptographic primitives pcr/pycryptopp 0.7.1-1   Python wrappers for the Crypto++ library pcr/python-pycrypto 2.6.1-3   Cryptographic primitives and algorithms for Python pcr/python2-pycrypto 2.6.1-3   Cryptographic primitives and algorithms for Python</pre>	
From <a href="https://www.pycryptodome.org/en/latest/src/introduction.html">https://www.pycryptodome.org/en/latest/src/introduction.html</a> :	
PyCryptodome is a fork of PyCrypto.	
From python-pycryptodome PKGBUILD:	
<pre>conflicts=('python-crypto') provides=('python-crypto') replaces=('python-crypto')</pre>	
Unless there are good reasons to keep pycrypto, we should remove it.	
Another candidate may be [pcr/pycryptopp]. I haven't looked at it yet. The only thing I've checked is that the last commit was in 2017.
