Description Hi, it looks like the packages nonsystemd/p11-kit and core/libp11-kit are in conflict, as they seem to be managing the same files. This is causing a problem on my system, because I needed to install multilib/lib32-p11-kit as a dependency of something else, which requires libp11-kit; however, that is conflicting with p11-kit on installation. p11-kit seems to be a dependency of several other packages, so I can't just replace it with libp11-kit.	

History

#1 - 2020-03-12 01:10 AM - Time4Tea

core/p11-kit and core/libp11-kit don't seem to suffer from the same conflict. So, it seems the problem may be that nonsystemd/p11-kit is trying to do the jobs of both packages, which is leading to the conflict with core/libp11-kit?

- Assignee set to Megver83

- Subject changed from p11-kit and libp11-kit seem to be conflicting to [nonsystemd/p11-kit]: and core/libp11-kit seem to be conflicting

maybe megver knows how to resolve this

#3 - 2020-03-25 06:54 PM - Megver83

- Status changed from unconfirmed to fixed

looks like p11-kit was updated by [bill-auger](#), solving this issue

I'll mark it as fixed
