

libretools - Bug #267

is not clear what CHROOTDIR and CHROOT do

2012-12-03 08:23 AM - fauno

Status: fixed	% Done: 100%
Priority: bug	
Assignee: lukeshu	
Category:	
Description	
I've set CHROOTDIR=/home/backup and CHROOT=chroot where my chroot is:	
<pre>/home/backup /home/backup/root /home/backup/chroot -> root (symlink)</pre>	
But running `libremakepkg` tries to work on "/home/backup/chroot/nicolas" so to make it work i had to do CHROOTDIR=/home; CHROOT=backup and run `libremakepkg -l chroot`.	

History

#2 - 2012-12-03 02:54 PM - lukeshu

To be added to the documentation:

The full path of the chroot is \$CHROOTDIR/\$CHROOT/\$CHROOTCOPY; where CHROOTCOPY is either set with the `-l` flag, or is your username (or 'copy' if you are root).
