

Packages - Freedom issue #2676

[firejail] Remove non-free profiles

2020-04-07 01:15 AM - Anonymous

Status: unconfirmed	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description	
<pre>\$ ls /etc/firejail</pre>	
I see non-free software profile. I want them to be gone.	

History

Did you migrate over from Arch or something? Because I install via the iso image. I don't see any /etc/firejail or firejail anywhere here. Please provide more information concerning your issue.

#2 - 2020-04-07 04:51 AM - bill-auger

this is essentially the same issue as with bleachbit - those files are nothing to worry about - they are not executable code, and they are freely licensed files; so there is no freedom or privacy problem with them - the only reason to remove them would be if the program suggests using the other non-free programs

FWIW, you could make your own customized package which removes them - we do like to encourage people to learn how to use makepkg to build their own packages - if you need help with that, just ask

#3 - 2020-04-07 04:51 AM - bill-auger

stretchp - the LiveISOs do not have firejail installed - you could use the pkgfile program though, to show which files any package will install

```
$ pkgfile -l firejail
```

How can I cross-compile it for i686 and arm from x86_64?

If it requires a VM, I don't have hardware virtualization support.

#5 - 2020-04-07 07:55 PM - freemor

libretools lets you do this. i686 doesn't require a vm and requires binfmt-qemu-static Not sure if you'd consider that a vm or not.

See the info on building for ARM for more details here:

https://wiki.parabola.nu/How_to_build_ARMv7_packages_from_a_chroot_with_PRoot_for_Parabola_ARM
