Description this is the current list of 'poppler' dependents for i686 systems - each time 'poppler' is upgraded in arch32, each of these packages should be rebuilt against the upgraded 'poppler', with sodeps for each 'libpoppler*.so', then the 'poppler-parabola' package should be upgraded to the same version as arch32 --- UPDATE: currently, neither cups-filters nor texlive-bin strictly needs to be rebuild each time poppler is upgraded - i believe that they vendor in their own poppler now - i remember that texlive-bin has not used the system poppler since about a year ago for that reason, this 'sticky' epic for poppler, could probably be closed permanently - OTOH, we prefer to use system libs whenever possible - i just havent decided to restore that or not - with poppler system libs, texlive-bin must be rebuilt each time either poppler or icu is upgraded; which is fairly often - there is discussion of whether we need blacklist replacements for any of texlive; so it is still an open question			
Subtasks:			
Bug # 2717: [libre/texlive-bin]: rebuild against new poppler (i686)			fixed
Bug # 2721: [libre/cups-filters]: rebuild against new poppler (i686)			fixed
