

Packages - Bug #276

[calibre] support using unar instead of libunar; remove nonfree fonts

2012-12-14 09:47 AM - mtjm

Status: fixed	% Done: 100%
Priority: feature	
Assignee:	
Category:	
Description	
<p>The package was blacklisted since it depends on libunar, maybe it's possible to implement and get accepted upstream code to use unar instead when libunar is not found.</p> <p>Debian changes this package for another reason (from debian/rules of calibre_0.9.0+dfsg-1):</p> <pre># Downloads the current upstream release according to # debian/changelog, and replace the non-free prs500 TTFs with symlinks # to their free liberation fonts counterparts. This also updates the unpacked # source tree to the new upstream version. get-orig-source: set -e; \ V=`dpkg-parsechangelog sed -rn '/^Version:/ {s/^Version: ([0-9.]+).*\\$/\1/; p}'`; \ mkdir -p debian/orig; cd debian/orig; \ wget -O - http://status.calibre-ebook.com/dist/src xz -cd tar x; \ D=`pwd`; rm -f calibre*/src/odf/thumbnail.py; \ cd calibre*/resources/fonts; \ rm prs500/tt0003m_.ttf; ln -s ../liberation/LiberationSans-Regular.ttf prs500/tt0003m_.ttf; \ rm prs500/tt0011m_.ttf; ln -s ../liberation/LiberationSerif-Regular.ttf prs500/tt0011m_.ttf; \ rm prs500/tt0419m_.ttf; ln -s ../liberation/LiberationMono-Regular.ttf prs500/tt0419m_.ttf; \ cd \$\$D; tar c . xz -9 > ../../../../calibre_\$\$V+dfsg.orig.tar.xz; \ cd ../..; rm -r debian/orig; \ find -mindepth 1 -maxdepth 1 ! -name '.bZR*' ! -name debian xargs rm -rf; \ [! -e setup.py] tar xzf ../../calibre_\$\$V+dfsg.orig.tar.xz --strip-components 2</pre>
