[iceweasel] Jitsi Meet doesn't work in 1:75.0-1.parabola3

2020-05-06 02:54 AM - Megver83

Status: fixed	% Done: 0%
Priority: bug	
Assignee: bill-auger

Description Just updated Iceweasel to the latest version, which is just a rebuild against latest icu, but for some reason Jitsi Meet (just tested the official meet.jit.si instance) simply doesn't work, I cannot listen nor see other users. Reverting to 1:75.0-1.parabola2 solves the problem (I've installed icu65 from the AUR, so it works)

It seems like Arch Linux has rolled out a fix for that:

<https://git.archlinux.org/svntogit/packages.git/commit/trunk?h=packages/firefox&id=e1cb0bd2db9dcdd7d6517153f2020ddd0654fcdd>

It's strange to me, because Arch did it for FF 76, and we are still in 75 which did not had that issue till parabola3 release, which is just a rebuild for latest icu. Maybe there's sth. related to that, who knows. But the important thing is that if that patch fixes the issue, then the cause wouldn't matter

i got iceweasel to build on beefcake by bypassing the profiling stage - there is a new package *.parabola4 you can try to see that made any difference - i ran the "WebRTC Troubleshooter" web page; and it gives the same result for me, with all of the last three releases: *.parabola2 *.parabola3 *.parabola4

What I do to test if it really works correctly, is to try Jitsi from two devices (in my case, my PC and my LOS phone with the Jitsi app)

the 1.parabola4 release hasn't solve anything

It happens to me too with iceweasel 1:75.0-1.parabola4.

iceweasel v76 is in the pipeline now - it has a fix for webrtc
