Status:

- ~~Distro boot upstream support is in discussion upstream (v5)~~ DONE
- ~~Once this is done I need to finish the u-boot PKGBUILD for I.MX~~ DONE
- imx\_usb\_loader needs to be packaged
- The tbs2910 needs to be integrated into the installation instructions
  - For that it would be better to have modular installation instructions with perfect support the lime2 first
  - It need to be made in a way that adds near 0 maintenance cost for each new ARM boards we add support for, else it doesn't scale.
  - Then we'd add the lime2-eMMC
  - And the TBS2910

edit 1: fix typo and add patch link.

edit 2: update status
