ghb: error while loading shared libraries: libx265.so.188: cannot open shared object file: No such file or director Y			

History

#1 - 2021-05-24 07:56 PM - GNUtoo

- Assignee set to GNUtoo

I'll try to refresh it again.

It seem that we have a little more than just x265:

```
$ /usr/bin/ghb
```

```
(gst-plugin-scanner:6956): GStreamer-WARNING **: 21:54:24.595: Failed to load plugin '/usr/lib/gstreamer-1.0/1  
ibgstx265.so': libx265.so.192: cannot open shared object file: No such file or directory
```

```
(gst-plugin-scanner:6956): GStreamer-WARNING **: 21:54:25.615: Failed to load plugin '/usr/lib/gstreamer-1.0/1  
ibgstaom.so': libaom.so.2: cannot open shared object file: No such file or directory
```

```
(gst-plugin-scanner:6956): GStreamer-WARNING **: 21:54:25.824: Failed to load plugin '/usr/lib/gstreamer-1.0/1  
ibgstsrst.so': libsrst.so.1: cannot open shared object file: No such file or directory
```

```
(gst-plugin-scanner:6956): GStreamer-WARNING **: 21:54:25.858: Failed to load plugin '/usr/lib/gstreamer-1.0/1  
ibgstopenexr.so': libIImf-2_5.so.25: cannot open shared object file: No such file or directory
```

Note that when I to re-encode some videos with some scripts using HandbrakeCLI, I had no sound, while with Guix Handbrake I had sound.

So we also need to check if that is solved after recompiling Handbrake.

#2 - 2021-05-24 08:34 PM - GNUtoo

I've rebuilt it locally (with makepkg) and it seems to fix the issue.

I'll rebuild it with libremakepkg and push the packages for at least i686 and x86_64.

#3 - 2021-05-24 09:04 PM - GNUtoo

- Status changed from unconfirmed to fixed

I've now pushed the packages, it reach the mirrors soon (~15 or 30 mins).

Denis.
