Description			
<p>I develop a website on parabola using kate as editor, konsole in kate itself and iceweasel. I edit files and test them with iceweasel. Recently, I find that Iceweasel doesn't update the files. Possibly it keeps a cache of the files or doesn't clear the memory. I killed the iceweasel process and then restarted it but still the memory remains.</p> <p>I get the older styles.css rendered rather than the new updated styles.css even if I start a new iceweasel process.</p> <p>I used "curl path" and it shows the correct updated styles.css . If I wait for a few minutes after killing the process, I get the updated styles.css .</p> <p>Please help. Waiting 5-10 mins for minor changes in code is very difficult to handle.</p>
