**Description**

this is related to [#2884](#2884) - we caused these bugs semi-intentionally this week, and are still working through the details to smooth things out - the full explanations is given on ticket [#2884](#2884)

this ticket is to collect, and resolve any conflicts which arise from the latest change to 'nonsystemd/base'

**Subtasks:**

Bug # 2884: your-initfreedom and systemd-nss-myhostname are in conflict - confirmed

**History**

### #1 - 2020-08-31 09:16 PM - bill-auger

the first one that i found was the 'cups' package - it is required by 'posix' and depends on 'systemd' - this will need to be resolved, so that 'posix' can be installed on nonsystemd systems

### #2 - 2020-08-31 09:17 PM - bill-auger

redmine user 'lake' reported a related conflict on the forum

lake - exactly what was the command that you typed, which exposed the conflict?

### #3 - 2020-08-31 09:26 PM - lake

bill-auger - The command was pacstrap /mnt xorg-server.

### #4 - 2020-08-31 09:48 PM - bill-auger

could you try this command instead:

```
# pacstrap /mnt xorg-server elogind
```

### #5 - 2020-08-31 10:17 PM - lake

Looks like that worked.
