Description I tried to install the Systemd version of Parabola using the LXDE Live CD and the Calamares installer would always crash if I chose to encrypt using Luks. When I unchecked that option the install finished without any further issue. Obviously I would prefer to have the startup encrypted. I have attached a copy of the install log that was provided as well as a screenshot of the error. I wasn't sure if I should report this to Calamares as it was their installer or here to Parabola as it was this OS I was trying to install. Sorry if I chose wrong. Any ideas on possible ways to fix or bypass the problem ? System Specs: Intel G3220 16GB DDR3-1333 Intel HD Graphics Mushkin SSD 120GB Asus Z87-A BIOS 2103
