

Documentation - Bug #2928

Cannot install OpenRC base system with instructions from wiki.parabola.nu/Installation_Guide

2020-11-13 01:13 AM - arnau

Status: not-a-bug	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description	
<p>The command given to install the base system with OpenRC at the following URL does not work: https://wiki.parabola.nu/Installation_Guide#OpenRC</p> <p>Here is the error message:</p> <pre># pacstrap /mnt base libelogind warning: removing 'systemd-libs' from target list because it conflicts with 'libelogind' error: unresolvable package conflicts detected error: failed to prepare transaction (conflicting dependencies) :: your-initfreedom and systemd-nss-myhostname are in conflict</pre> <p>And indeed, <code>pacstrap /mnt base libelogind --print</code> shows that <code>systemd-nss-*</code> and <code>systemd-libs</code> are being selected. I had to use the command given on https://wiki.parabola.nu/OpenRC#Base_system, namely:</p> <pre>pacstrap /mnt base elogind libelogind udev-init-scripts your-initfreedom</pre> <p>The reason why <code>pacstrap /mnt base libelogind</code> does not work is explained on https://wiki.parabola.nu/OpenRC#Base_system: <i>Note that although libelogind is pulled by elogind many other packages will try to pull systemd-libs (which is provided by libelogind, but pacman tries to install systemd-libs when libelogind is not explicitly listed), that's why you must specify it even if elogind is installed along.</i></p>	

History

i can not reproduce that - it works as expected from a LiveISO -

make sure that `[nonsystemd]` is enabled in `/etc/pacman.conf`; then run `pacman -Syyuu` on the host (anytime you modify `pacman.conf`)

#2 - 2020-11-16 09:38 PM - arnau

I'm sure `[nonsystemd]` was enabled. Strange that you cannot reproduce it. I will try again when I have some time.

Anyhow, `Installation_Guide` and `OpenRC` pages should give the same command to install the base system.
