just a note - there is an upgrade available upstream (v2.2.4); but this can not be upgraded until icedove v78 is done - the PKGBUILD is ready and it compiles successfully; but i saw a warning that it is incompatible with the previous thunderbird

<https://git.parabola.nu/abslibre.git/tree/libre/icedove-extension-enigmail?h=wip-2020-12-05-blender-icedove>

if we can not get icedove v78 out soon; the fix for this ticket would be to rebuild same version in abslibre/master (2.1.7)
