

Packages - Bug #2968

[wxgtk] could not be resolved

2021-01-26 05:16 PM - Phosit

Status: fixed	% Done: 0%
Priority: bug	
Assignee: bill-auger	
Category:	
Description wxgtk2 and wxgtk3 don't provide wxgtk anymore. https://github.com/archlinux/svntogit-packages/commits/packages/wxgtk/trunk The error occurred to me when I tried to install odamex.

'wxgtk2' was the only provider of 'wxgtk' - the following packages just need rebuilding, with depends='wxgtk2' instead

```
# parabola-dependents wxgtk
updating database ....
package 'wxgtk' not found - creating dummy
dummy package 'wxgtk' created
searching ....
compiling results for (4) dependencies ....
```

```
pcr/freerdp                (0 higher-order deps)
pcr/icinga-studio           (0 higher-order deps)
pcr/imule                   (0 higher-order deps)
pcr/odamex                  (0 higher-order deps)
```

(0 ignored)

re 'imule': the HTTP server hosting the source code is offline - it was apparently the only upstream host - source code may be acquired now, only via the IP2 network - the changes to the latest PKGBUILD (synced from AUR) attempt to accomplish that; but I did not try it

I scanned the parabola source archives, in attempt to rescue this package; but did not find a source-ball - for these reasons, I have deleted the parabola binary packages (i686.x86_64 - apparently none was ever built for ARM)

the software has not changed in years though - in theory, someone could perform surgery on the existing binary packages to restore it; but without source code, we probably do not want it anyways
