

libretools - Bug #30

[libretools] fullpkg-find copies too much

2012-03-02 10:31 PM - mtjm

Status: fixed	% Done: 100%
Priority: bug	
Assignee: xihh	
Category:	
Description	
This code:	
<pre># Copy dir to build_dir else cp -r ../\${pkgbase}/ \${build_dir}/</pre>	
will copy too much, making this a very slow process, and fail in some cases due to limited space on a tmpfs (e.g. when having unpacked qt source, outdated qt in repo and building a package depending on qt).	
Not sure if there is a simple way to solve this, if there isn't any it should show a warning if the directory is bigger than a specific small limit, so the user knows what it does.	

History

#3 - 2012-06-05 12:58 AM - xihh

I think this problem is fixed on commit ff089d0a64dbf280c73e2ad6b11f82d015e229bd.

The code added is copied from makechrootpkg.

#4 - 2012-06-05 04:13 AM - xihh

I think this is working fine. Will update libretools packages.
