Description I suggest to include asciidoctor-pdf as it is a unique stand-alone PDF document creator, that does not require TeX. It makes excellent presentations. https://aur.archlinux.org/packages/asciidoctor-pdf	

History

#1 - 2021-06-04 12:04 PM - bill-auger

im not too familiar with the specialized document creation tools; but i wonder, could this replace calibre?

#2 - 2021-06-04 02:09 PM - maddox

This is more similar to Org mode and Org exports. <https://asciidoc.org/userguide.html>

Asciidoc is lightweight markup language older than Markdown, it exports to anything, a2x is program that exists in the system.

Asciidoctor is new implementation, and also asciidoctor-pdf should be there, it produces beautiful PDFs without LaTeX.

#3 - 2021-06-04 10:14 PM - maddox

I wish to say that both programs could be included in Parabola:

1. asciidoctor, it creates beautiful websites and documents, books, EPUB, etc. Example output is their website <https://docs.asciidoctor.org/home/>
2. asciidoctor-pdf, <https://asciidoctor.org/docs/asciidoctor-pdf/> and here is example of a document and screenshot of PDF: <https://asciidoctor.org/docs/asciidoctor-pdf/#an-example-asciidoc-document>
