Description
I have chosen version with the graphic installer dual architecture iso. whilst I am trying to boot from the usb drive it lists (so detects 32bit only cpu) i686 kernel and attempts to boot it but then shows error: "Kernel requires an x86-64 CPU, but only detected an i686 CPU" 32 bit kernel is selected why such message?

note the warning on the downloads page:

> Warning: The current 'dual' LiveISOs do not boot on 32-bit computers,
> as they normally would. Use an 'i686' ISO instead.
