eliotime3000 - you are using the icedove in [libre-testing]? - did you run the enigmail migration?

the icedove-* language packs in [libre] are for the icedove in [libre] - there are no icedove-* language packs for the icedove in [libre-testing] - theyre not really needed anymore - you can install the language from the GUI

those thunderbird language packs are new and need to be added to the blacklist

```

this is simple to fix - i am more interested in the answer to my first question - are you using the icedove in [libre-testing]? - did you run the enigmail migration?

the enigmail migration is the only reason it is still in testing
- it would be good to know if it works for people who needed it
