- Status changed from unconfirmed to in progress

- Subject changed from Link Broken to broken torrent link for systemd lxde 2019.06 complete ISO

thanks for noticing - there is no torrent for that ISO; and it is not possible to hide the link - each entry is a generic template,, which does not account for such special cases

that ISO was put there only for special cases (some computers can not boot the other ISOs) - most people should not use it - the '-pre' in the filename indicates that it was a special release

there is work in progress for a completely new downloads page which is not a wiki, and has server-side support for finding the files and generating links only for files which exist
