Description

Hello! I found that the version of Getting Things GNOME! (`gtg`) planning app on PCR is quite old, and requires `python2` stuff, so here's a more recent PKGBUILD I found on AUR. `gtg` now requires a Python library designed specifically for this app, called `python-liblarch`, so here's also a PKGBUILD I found on AUR. I couldn't find any non-free component, nor vendored dependencies, so I guess it's safe to add; but further analysis is required!
