

Packages - Bug #3091

System installation does not work with [linux-libre-lts] and [syslinux]

2021-09-02 09:22 PM - Anonymous

Status: not-a-bug	% Done: 0%
Priority: bug

Description The following script works: works.txt (attached) And the following script doesn't: doesnt.txt (attached) The only difference is the "-lts" in line 4. Specifically, what "doesn't work" is that it's looping on "Automatic boot in 5 seconds" in the syslinux menu. I'm not 100% sure that it's related to syslinux, but it seemed to work if I switched to GRUB. I spent sooo much time trying to pin down the cause of the issue, especially since it was my first time using Parabola, so please, I think we need to add a comment on the official installation guide ASAP linking to this issue. PS: The issue is still present if I use UUIDs in my syslinux.cfg, or if I use a separate boot partition, or if I install syslinux manually. I did not test with GPT instead of MBR.	

History

#1 - 2021-09-02 09:30 PM - Anonymous

- File doesnt-v2.txt added

Sorry wrong file, see this one instead

#2 - 2023-10-29 09:37 PM - Anonymous

sorry community, but seeing this issue with zero attention, and it's such a basic question from a newcomer, means this distro is dead/abandoned for me...

#3 - 2023-10-30 02:01 AM - bill-auger

- Status changed from unconfirmed to not-a-bug
