Description	
<ul style="list-style-type: none">• steps to reproduce: Open any folder in Dolphin.• expected result: The folder contents should show.• actual result: Instead, for some folders, I get a message that says "Unable to create io-slave. klauncher said: Could not find the '/usr/lib/qt/plugins/kf5/kio/file.so' plugin." and "Folder is empty", but only for some folders.	
I know you did some stuff with kio recently, so I assume this issue has to be related with the latest changes made to the repository.

Help! I'm totally unable to save this PDF in Okular! I made annotations and now I can't save because of the same kio error.
