Description I am using a ASUS Geforce GT 710 with pcie X1 interface (Model GT710-4H-SL-2GD5) because I want to use a NVME Adapter in the X16 Slot. I discovered some strange behavior. When using the card in a X1 Slot the screen turns black after grub and kernel initialization. When I put the card in the X16 port, everything works fine and the screen turns not black. I think this is an issue withe the parabola image, arch has the same issue, but Trisquel works with the card in X1 slot.
