[mysql-openrc] Error in the init file

2021-11-16 07:21 AM - Marx.FelipeForte

Status: confirmed	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description	
after syncing the mysql-openrc package running rc-service mysql start the following error:	
<code>my_print_defaults: unknown variable 'config-file=/etc/mysql/my.cnf'</code>	
this is possibly because the init script has these lines:	
<pre>get_config() { my_print_defaults --config-file="\$1" mysqld sed -n -e "s/^--\$2=//p" }</pre>	
although I haven't been able to make mysql (MariaDB) work with OpenRC, to fix this error, the line should be changed to:	
<pre>get_config() { my_print_defaults --defaults-file="\$1" mysqld sed -n -e "s/^--\$2=//p" }</pre>

- Status changed from unconfirmed to confirmed

The current script is out of date but you can take the mariadb-openrc PKGBUILD from PR [#53](#) that will make the openrc init script work again
