

## libretools - Bug #314

### have per-user staging dirs to support concurrent librerelease runs

2013-04-07 01:48 AM - mtjm

<b>Status:</b> fixed	<b>% Done:</b> 100%
<b>Priority:</b> bug	
<b>Assignee:</b>	
<b>Category:</b>	
<b>Description</b>	
Example cases when it's needed:	
<ul style="list-style-type: none"><li>• Alice uploads a new KDE release, after hours of uploading kdeartwork-wallpapers the network breaks, Bob runs librerelease on a single small package, db-update removes kdeartwork-wallpapers, Alice spends hours resending it.</li><li>• Alice uploads packages while new ones are building, rsync uploads some found after the signing is done, Bob uploads another package and db-update run by Bob fails due to missing signatures for Alice's packages.</li></ul>	
There are more specific bugs in these cases and it's possible for others to be found. All of them involve different users running librerelease and db-update, so using a different staging directory for each user and making db-update run on only one such staging directory would solve them and doesn't need more complex changes.	

#### History

##### #3 - 2013-06-03 08:28 PM - lukeshu

Without resorting to extreme trickery in librerelease, this needs to be done in dbscripts.

##### #4 - 2013-09-30 02:28 PM - lukeshu

This is fixed in libretools 20130930.
